The speed limiting device ; No going back

The magic wand behind speed limiter utilizes a series of sensors which detect how fast a vehicle is moving and communicates the information to the engine computer that manages nearly all the engine functions. Once the vehicle reaches the predetermined speed, the computer steps in and restricts the flow of air and fuel to the engine and even the spark plug that causes combustion. Through this way the vehicle is unable to exceed the top speed as set by the manufacturers.

Though, the statement on the innovation appears simple, the enormous benefits can hardly be quantified. The campaign for the installation of speed limiter had been met with several reactions from the motoring public, those that kicked against the speed policy are largely done out of misconception because logically one can believe that the severity of most crashes are directly related to the rate of speed of the vehicle. Beside, investigation has shown that over speeding has been the leading cause of road traffic crashes all over the world.

In a recent ceremony organized by NGO where the corps received a merit award on speed limiter promotion, a recipient driver confessed that he gains very little time whenever he travelled on suicidal speed. Studies have equally shown that two vehicles cornering 150km journey with one moving at moderate speed of 100km/hr and the other at a suicidal speed of 130-140km/hr will arrive same destination with the latter gaining only 9 minutes. The question now is, what could one accomplish in 9 minutes to warrant the suicidal speed? The benefits of speed limiter cannot be overemphasized, because it has been proven to improve efficiency and operating cost of the vehicle and above all enhance road safety. It is no wonder then that the corps in recent past has taken the campaign further by initiating the certification of fleet operators who have complied with the installation requirement. Therefore, *Install your speed limiter today to save lives.*
